> Problem solving

> Teamwork

> Self-directed learning

> Attention to detail

Professional Summary

Full Stack Developer and Database Engineer covering the complete project lifecycle: from requirements engineering and client analysis, through database modeling, to backend and interface development. I work with relational, document and graph databases, and a stack that includes React and TypeScript on the frontend and Node.js, Python, Java and C# on the backend. I focus on clean code, scalable architecture and best practices.

Education

Universidad Europea del Atlántico

Bachelor's Degree

Computer Engineering

Santander, Cantabria, Spain • September 2023 - Present

Projects

Davidario

2025

- Systems Analyst

Analysis and design of an exam-scheduling system built for a real client.

I developed the domain model, actors and use cases, prototypes and requirements prioritization, documenting the entire process in UML and Markdown.

SnackSmasher

2025 - Present

- Full Stack Developer

Web platform for a restaurant featuring a table and arcade reservation system, user reviews and event management. Backend in C# with SQL Server and frontend in React + TypeScript + Vite.

aejhernandez.dev

2026 - Present

- Full Stack Developer

Personal portfolio designed and built from scratch with Next.js, TypeScript and Tailwind CSS. Includes bilingual support (ES/EN), animations, responsive design and SEO optimization with dynamic Open Graph.
